

Claude Power Pack.

A full Claude setup, tuned over months of daily use: the skills, the plugins, the working rules and the connectors. Install it with one command and your Claude works like a careful senior teammate from day one.

94 skills, plus 9 optional extras	9 plugins installed for you	14 app connectors mapped out	15 desktop extensions listed	1 command to install it all
---	---------------------------------------	--	--	---------------------------------------

01 It acts instead of asking

Maps the options, picks the best one and builds it. It only stops for things that truly need you: money, passwords, messages to people.

02 It tests before it says "done"

Runs the code, clicks through the screens, checks the output. Big jobs get a second, independent review.

03 Design that doesn't look AI-made

23 design skills push past the default purple-gradient template look, and check the result in a real browser.

04 It reaches your tools

Gmail, Calendar, Drive, Notion, Figma, Canva, Vercel and more, plus web research, scraping and browser control.

Install in one line

Backs up your current setup first. Never overwrites your own files unless you ask.

```
$ bash install.sh --tools
```

94 skills, sorted by job.

A skill is a set of expert instructions Claude loads only when the task needs it. You never have to name one: describe what you want and Claude picks the right skill. Or type `/name` to call one directly.

Web research & browsers

search, scrape, crawl, automate

35

`firecrawl` · deep research, competitor intel, lead lists, site QA · `tavily-research` · `playwright-cli` · `reel-reader` · watches a video link for you

Design & frontend

UI that looks hand-built

23

`impeccable` · `design-taste-frontend` · `hallmark` · `uiux-pro-max` · `emil-design-eng` · `brandkit`

Cloudflare & web platform

deploy, edge, performance

13

`cloudflare` · `wrangler` · `agents-sdk` · `web-perf` · Core Web Vitals

Animation & motion

web and React Native

6

`animate` · `animate-expo` · `review-animations`

Working smarter

Claude improving itself

5

`graphify` · codebase knowledge graph · `humanizer` · `claude-setup-tuneup`

AI image & video

generation

4

`higgsfield-generate` · images, video, 3D · product shoots · consistent characters

Video editing

DaVinci Resolve and reels

3

`resolve-editor` · cuts inside Resolve · `resolve-colorist` · full grade · `ai-reel-editor`

Marketing & writing

ads and posts

3

`ad-creative-pro` · `hormozi-ad-factory` · `technical-blog-writing`

Security & SEO

before you go live

2

`never-get-hacked` · app security audit · `seo-checklist` · 20-point audit and fixes

Plus 9 plugins

superpowers

The method: brainstorm, plan, test-first, debug properly, verify before "done"

karpthy guidelines

Stops overbuilding, unasked changes and hidden assumptions

figma

Design to code and code to design, FigJam, slides

firebase

Firestore, auth and hosting through Firebase's own tools

brag

Turns a project's website into a launch video

design

Critique, accessibility audits, UX copy, dev handoff

marketing

Campaign plans, content, email sequences, reports

brand-voice

Finds your brand's voice and checks content against it

legal

Contract review, NDA triage, compliance checks

Hook up your apps. Then you're set.

Connections belong to your own accounts, so they can't ship in a package. The pack tells you exactly which ones are worth it and where to switch each on. Most are free.

claude.ai connectors

Gmail

search, read, draft

Google Calendar

events, free time

Google Drive

find and create files

Notion

pages and databases

Figma

designs in and out

Canva

create and export

Vercel

deploys and logs

Make

app automations

HubSpot

CRM and reports

Firecrawl

web search, scraping

Hugging Face

models and papers

Higgsfield

AI image and video

Ahrefs

SEO data

Hostinger

sites and hosting

Desktop extensions (Mac)

Desktop Commander

Control your Mac

MacOS-MCP

Control Chrome

Apple Notes

iMessages

PDF viewer

Figma

Shadcn UI

DaVinci Resolve

Filesystem

Apify

Tableau

Cloudglue

Minutes

Dashed ones are optional. Plus Claude in Chrome, computer use and scheduled tasks, which come with the apps.

Set up for you

Playwright browser

Chrome DevTools

Opus, high effort

Workflows on

Working rules

1

Get the apps

Claude desktop app and Claude Code, signed in with your Max account.

```
curl -fsSL
https://claude.ai/install.sh
| bash
```

2

Run the installer

Skills, rules, settings, plugins, browser tools and the command-line tools the skills use.

```
bash install.sh --tools
```

3

Connect and sign in

claude.ai > Settings > Connectors, then the desktop extensions and tool logins from the checklist.

```
bash tools/verify.sh
```

Or just hand it to Claude.

Open the folder in Claude Code and say `install this`. Claude follows the included guide, runs the installer and walks you through the few logins only you can do. Every skill is explained in `docs/SKILLS.md`, every connector in `docs/CONNECTORS.md`, and `docs/SETUP-CHECKLIST.md` walks through setup with test prompts and how to undo it. Get it at github.com/mppyxx/claude-power-pack
